

FINALLY... a TRAINING BATON THAT ACTS LIKE THE REAL THING!

Blue Baton* represents the many expandable police, military, corrections and security batons that are in the field. Now your officers and soldiers can train with a tool that is more realistic than most existing training batons.

image shown
with optional
mushroom cap >

Its minimal weight, approximately 90 grams/3.17 oz, makes it less susceptible to causing injury than heavier training batons
(Mass x Acceleration = Force)

Blue Baton comes with two different end caps should the officer currently use a mushroom-shaped or regular based end cap. The striking section of the baton is made from synthetic rubber which is flexible when used. Blue Baton also fits into the multitude of common holsters/scabbards whether open or closed.

*Patent Pending

ABOUT US:

Blue Training Systems is a small business dedicated to increasing the safety of law enforcement, military and security operators by making their training experience more realistic.

The owner of Blue Training Systems, Clive Milligan, is a veteran law enforcement officer with over twenty years of policing experience in a major metropolitan police agency in Canada. He has spent a majority of his service teaching officers force options including: CQB, OCS, Baton, Tactical Communication, Multiple Assailants, RBT, Winning Mindset, Crowd Control and most recently Waterborne Combatives. He recognized a missing component (non-realistic training batons) in the collection of training equipment and RBT gear.

A REVOLUTION... IN POLICE, MILITARY + CORRECTIONS TRAINING BATONS.

Until the design of Blue Baton by Blue Training Systems, there was no known expandable/collapsible training baton of its design currently on the market. Blue Baton is made from a lightweight nylon which is molded into an expandable baton and can withstand extreme forces and temperatures while maintaining its integrity under normal striking/combatative training conditions. Its unique design does not require any special gadgetry to operate it and does not require any special maintenance before, during or after its use.

- Same training techniques as before
- Withstands a wide range of weather environments
- Optional mushroom end cap
- Fits in most holsters
- No maintenance required

REALITY BASED TRAINING HAS NEVER BEEN SO REAL!

This unit allows the officer to select the baton (if appropriate) and actually employ the same motor skills and negative time framing (accessing, drawing, extending, striking) that he/she would in the field. It also builds effective "mind maps" from repetition of proper technique.

SAFETY NOTE:

This training baton should only be used on fully padded and trained role players or on inanimate striking surfaces such as martial arts training/striking bags. *Refrain from Deadly Force Targets (head, neck, throat, groin) and unprotected hands or skin.*

**GREAT FOR
BATON PRACTICE
TECHNIQUES!**
